

Weebit Nano update on development and commercialisation plans in the financial media

25 May 2018 – Weebit Nano (ASX: WBT) CEO, Coby Hanoch, provided an update on the company’s development and commercialisation plans for its next generation ReRAM memory technology in a recent visit to Australia.

The interviews discuss the following topics:

- The growing need for Weebit Nano’s memory technology as demand for data increases exponentially, and the computing industry evolves into machine learning, artificial intelligence (AI) and the Internet of Things (IoT)
- Weebit Nano’s unique characteristics
- The recent changes in Weebit Nano’s board and management team, adding Yoav Nissan-Cohen, a world renowned expert in non-volatile memories, and Fred Bart, an experienced Australian entrepreneur
- Pathway to commercialisation and revenue; and
- Discussions with partner & customer prospects.

Links to the interviews, including a CommSec Executive Series interview with Tom Piotrowski, can be accessed at Weebit Nano’s website: <https://www.weebit-nano.com/>

About Weebit Nano Limited

Weebit Nano is a leader in the development of next generation computer memory technology, and plans to become the new industry standard in this space. Its goal is to address the growing need for a significantly higher performance and lower power computer memory technology. Weebit Nano’s ReRAM technology is based on fab-friendly Silicon Oxide, allowing the company to rapidly execute, without the need for special equipment or preparations. The company secured several patents to ensure optimal commercial and legal protection for its ground-breaking technology.

Weebit Nano’s technology enables a quantum leap, allowing semiconductor memory elements to be significantly cheaper, faster, more reliable and more energy efficient than the existing Flash technology. Weebit Nano has signed an R&D agreement with Leti, an R&D institute that specialises in nanotechnologies, to further develop SiOx ReRAM technology.
